

ABSTRACT OF THE DISCLOSURE

[0058] A method of forming a liquid crystal display device includes forming a plurality of thin film transistors and pixel electrodes on a first substrate; forming a dielectric frame and a sealant on a second substrate, the height of the dielectric frame being different from the height of the sealant; dispensing liquid crystal on the first substrate; and attaching the first and second substrates to each other.

1. A method of forming a liquid crystal display device, comprising:
forming a plurality of thin film transistors and pixel electrodes on a first substrate;
forming a dielectric frame and a sealant on a second substrate, the height of the dielectric frame being different from the height of the sealant;
dispensing liquid crystal on the first substrate;
attaching the first and second substrates to each other.
